

Production Technician

The Company

BBI Solutions has been serving the global diagnostics industry for over 50 years and is the world's largest independent producer of immuno-diagnostics reagents.

We develop and manufacture critical components for the diagnostic industry, but also apply our expertise by delivering solutions that bring critical components together in the development and manufacture of point of care and conventional tests.

Furthermore, our Novarum Mobile Diagnostic Platform complements across the diagnostics workflow to interpret and share assay results. This makes BBI unique among IVD suppliers.

Our range of immuno-diagnostics reagents includes human antigens, antibodies, enzymes and serum and plasma products. With manufacturing sites spanning four continents, we produce world-renowned labels for lateral flow, ELISA assay and biosensors, including our high-quality gold nanoparticles and glucose oxidase.

The acquisition of German-based DIARECT AG in June 2020 established BBI as the leading provider of antigens in the autoimmune and tick-borne IVD markets.

BBI Solutions is part of the BBI Group.

We currently have an exciting opportunity for a Production Technician to join us on a permanent basis at our Porton Down site.

Benefits

The salary offered for this role is competitive and makes up part of BBI's attractive benefits package, which includes:

5% contributory pension scheme

Life Assurance

Private health care scheme

Generous annual leave package totalling 32 days (inclusive of bank holidays)

Cycle to work scheme

The Role

As a Production Technician, you will work within a small team on contract and internal manufacturing projects. Projects will primarily involve routine manufacture of small and large scale quantities of monoclonal antibodies from clones supplied by the customer as well as production of other bio-reagents used in the detection of biological and explosive targets. The role will require work to be carried out within the Quality Management System (ISO 13485).

Key responsibilities will include but not be limited to:

- work as part of the team supporting the production of antibodies and other reagents
- carry out laboratory and office based tasks including maintenance and cleaning to provide a safe and efficient environment to work
- carry out experimental work both supervised and un-supervised, as approved by Line Manager
- write up worksheets for manufacture records in a format and timescale adhering to BBI group quality procedures
- support dispatch of products to customers
- support maintenance of consumable materials and chemicals using the appropriate business software and procedures and dealing with suppliers
- work cooperatively within the team, sharing ideas and concepts to enable achievement of goals
- form good relationships within the team and across the group
- support the Site Leader and BBI Detection Commercial team in delivery of the business
- use software systems appropriately to support the business e.g. Microsoft Office, ERP (Sage X3)
- clean and maintain laboratory facilities in line with quality and health and safety requirements
- work in accordance with site and legislative employment policies and safety requirements
- the role will be expected to support all internal, customer and regulatory/certification audits
- the role would be expected to support all manufacture and development projects across the business

Requirements

To be successful in your application, you will need a degree in a Scientific discipline.

The ideal candidate will have some experience of working within a laboratory environment and/or experience of working within a Quality management/manufacturing environment (ISO 13485).

If you are an internal employee applying for this vacancy, you and your manager are required to complete an internal transfer form. This needs to be completed in full and attached to your application along with your CV and cover letter.
